DESCRIPTIONS: \*Refineries, \*Naphthalenes,  
\*Crystallization, Impurities, Solubility.

A technique is proposed for refining a finely dispersed crystalline substance by rinsing a layer of this substance in one constant direction with a solvent in which both the substance to be refined as well as the impurities are easily dissolved. The technique is characterized by the fact that the solvent used is saturated with the substance to be refined and the flow rate is set at no more than 1 cm/minute.
